BUSINESS REQUIREMENT DOCUMENT

ShopEasy Ecommerce Platform

One Click Checkout Feature

Document Type	Business Requirement Document (BRD)
Domain	Retail Ecommerce | Web Application
Feature	One Click Checkout for Returning Customers
Prepared By	Yash Isokar | Business Analyst
Version	1.0 — Final
Date	April 2026
Status	**Approved**

1. Executive Summary

ShopEasy is a retail ecommerce platform serving over 2 million registered customers across India offering products across Electronics, Fashion, Home, and Grocery categories. This Business Requirement Document defines the complete requirements for implementing a One Click Checkout feature for returning customers.

Currently, the checkout process requires customers to complete 6 mandatory steps — Cart Review, Address Selection, Delivery Option, Payment Method, Order Review, and Confirmation. Research shows that 68% of customers abandon their cart during this process, resulting in significant revenue loss. The One Click Checkout feature will allow returning customers with saved address and payment details to complete a purchase in a single click, dramatically reducing cart abandonment and increasing conversion rate.

1.1 Business Problem

Problem Statement

ShopEasy's current 6-step checkout process is causing 68% cart abandonment rate among returning customers. Customers who have already saved their address and payment details are being forced to re-enter or re-select the same information repeatedly, creating friction and frustration. Competitor platforms like Amazon and Flipkart already offer one-click or express checkout — resulting in ShopEasy losing repeat customers to competitors. Estimated monthly revenue loss due to checkout abandonment is Rs. 2.4 crore.

1.2 Business Goals & Success Metrics

Business Goal	Current State	Target After Feature
Reduce cart abandonment rate	68%	Below 35%
Increase checkout conversion	32%	Above 65%
Reduce checkout time for returning customers	4-6 minutes	Under 30 seconds
Increase repeat purchase rate	28%	Above 45%
Improve customer satisfaction score	3.6 / 5.0	Above 4.3 / 5.0

1.3 Proposed Solution

- Implement One Click Checkout button on product pages and cart for returning customers
- Use saved default address and default payment method to skip all intermediate steps
- Show order preview popup before final confirmation to prevent accidental orders
- Send immediate order confirmation via email and SMS after purchase
- Allow customers to manage saved addresses and payment methods from account settings
- Provide option to change address or payment before confirming one click order

2. Stakeholder Analysis

2.1 Stakeholder Register

Stakeholder	Role	Department	Interest	Influence
Product Manager	Sponsor	Product	Revenue growth, conversion rate	Very High
Returning Customer	Primary User	External	Fast, easy checkout experience	Very High
IT / Dev Team	Builder	Technology	Technical feasibility, security	High
UX Design Team	Designer	Design	Seamless user experience	High
Payment Gateway	External Partner	Finance	Secure tokenized payments	High
Finance Team	Approver	Finance	Revenue impact, fraud prevention	Medium
Customer Support	Internal User	Operations	Fewer accidental order complaints	Medium
Security Team	Reviewer	Technology	Payment data security, PCI DSS	Medium
QA Team	Validator	Technology	Requirement coverage, quality	Low

2.2 Stakeholder Communication Plan

Stakeholder	Communication Type	Frequency	Method
Product Manager	Sprint review, status update	Weekly	Meeting + Email
IT / Dev Team	Requirement walkthrough, clarification	Daily standup	JIRA + Standup
Finance Team	Business impact review	Milestone-based	Presentation
Security Team	Security requirement sign-off	Once + Review	Email + Document

3. Project Scope

3.1 In Scope

- One Click Checkout button on product detail page for returning customers
- One Click Checkout button on cart page for returning customers
- Order preview popup showing items, address, payment, and total before confirmation
- Saved address management — add, edit, delete, set default
- Saved payment method management — add, delete, set default (tokenized)
- Order confirmation page and email/SMS notification
- Cancellation option within 5 minutes of one click order placement
- Web platform (desktop and mobile browser)

3.2 Out of Scope

- Mobile app (iOS and Android) — Phase 2
- Guest checkout flow — no changes in Phase 1
- New customer checkout — applies to returning customers only
- International payment methods (UPI international, foreign cards)
- COD (Cash on Delivery) for one click checkout — Phase 2
- Bulk or wholesale order checkout

3.3 Assumptions

- Customer must be logged in to use One Click Checkout
- Customer must have at least one saved address and one saved payment method
- Payment method tokenization is handled by existing payment gateway partner
- Default address and payment method are pre-set by customer in account settings

4. Current State — AS-IS Checkout Process

The current checkout process for returning customers involves 6 mandatory steps regardless of whether the customer has previously saved their details. This creates unnecessary friction and is the primary driver of cart abandonment.

Step	Step Name	What Customer Does	Pain Point
1	Cart Review	Reviews items, quantities, prices	Even for single item repeat purchase
2	Address Selection	Selects from saved or enters new address	Must manually select even if default set
3	Delivery Option	Chooses standard or express delivery	Extra step adding time to checkout
4	Payment Method	Selects saved card or enters new payment	Must re-select every time — no default used
5	Order Review	Reviews complete order summary	Repetitive for frequent shoppers
6	Order Confirmation	Clicks Place Order and waits	Total time 4-6 minutes average

5. Future State — TO-BE One Click Checkout Process

The proposed One Click Checkout reduces the returning customer checkout journey from 6 steps to 1 step — a single click with a preview confirmation popup before order placement.

Step	Step Name	What Happens	Improvement
1	Click Buy Now (One Click)	Customer clicks One Click Checkout button	Single action replaces steps 1-4
2	Order Preview Popup	System shows item, address, payment, total	Prevents accidental orders, builds trust
3	Confirm Order	Customer clicks Confirm — order placed	Total time under 30 seconds

5.1 Gap Analysis — AS-IS vs TO-BE

Area	AS-IS (Current)	TO-BE (Future)	Gap / Change Required
Checkout Steps	6 mandatory steps	1 click + 1 confirmation	Build One Click button and popup
Address Usage	Manual selection every time	Auto-use default address	Default address logic implementation
Payment Usage	Manual selection every time	Auto-use saved default payment	Tokenized payment auto-selection
Checkout Time	4-6 minutes average	Under 30 seconds	Remove all intermediate steps

Accidental Orders	Not applicable — multi-step confirms	Preview popup prevents accidents	Build order preview confirmation popup
Cancellation	No post-order quick cancel	5-minute cancel window after order	Build quick cancellation feature

6. Functional Requirements

6.1 One Click Checkout — Core Requirements

Req ID	Requirement Description	Priority	Type
OCC-001	System shall display One Click Checkout button on product detail page for logged-in returning customers with saved address and payment	High	Functional
OCC-002	System shall display One Click Checkout button on cart page for logged-in returning customers with saved address and payment	High	Functional
OCC-003	One Click Checkout button shall NOT be visible to guest users or new customers without saved details	High	Functional
OCC-004	System shall display order preview popup showing: item name, quantity, price, default delivery address, payment method last 4 digits, delivery estimate, and total amount	High	Functional
OCC-005	Customer shall be able to change delivery address from within the order preview popup before confirming	High	Functional
OCC-006	Customer shall be able to change payment method from within the order preview popup before confirming	High	Functional
OCC-007	System shall place order and deduct payment within 10 seconds of customer clicking Confirm in the preview popup	High	Functional
OCC-008	System shall display order confirmation page with order ID, estimated delivery date, and tracking link after successful placement	High	Functional
OCC-009	Customer shall receive order confirmation email within 5 minutes and SMS within 2 minutes of successful order placement	High	Functional
OCC-010	Customer shall be able to cancel a one click order within 5 minutes of placement without contacting customer support	High	Functional

6.2 Saved Address Management Requirements

Req ID	Requirement Description	Priority	Type
ADD-001	Customer shall be able to save up to 5 delivery addresses in their account	High	Functional
ADD-002	Customer shall be able to set one address as default — this address shall be used automatically for One Click Checkout	High	Functional
ADD-003	Customer shall be able to add new address with fields: Full Name, Phone, Address Line 1, Address Line 2, City, State, Pincode, Address Type (Home/Work/Other)	High	Functional
ADD-004	System shall validate pincode and auto-populate City and State based on pincode	Medium	Functional
ADD-005	Customer shall be able to edit or delete any saved address from account settings	Medium	Functional

6.3 Saved Payment Method Requirements

Req ID	Requirement Description	Priority	Type
PAY-001	Customer shall be able to save up to 3 payment methods (credit card, debit card, UPI) in their account	High	Functional
PAY-002	Payment card details shall be stored as tokens via payment gateway — full card number shall never be stored on ShopEasy servers	High	Functional
PAY-003	Customer shall be able to set one payment method as default — this shall be used automatically for One Click Checkout	High	Functional
PAY-004	Order preview popup shall show only last 4 digits of saved card for security	High	Functional
PAY-005	Customer shall be able to delete any saved payment method from account settings	Medium	Functional
PAY-006	If saved payment method fails during one click checkout system shall display error and redirect to full checkout with payment selection	High	Functional

6.4 Non-Functional Requirements

Req ID	Requirement Description	Priority	Type
NFR-001	One Click Checkout order placement shall complete within 10 seconds end to end	High	Performance
NFR-002	Payment processing shall be PCI DSS Level 1 compliant	High	Security
NFR-003	One Click Checkout feature shall support 50,000 concurrent users without performance degradation	High	Scalability
NFR-004	System shall have 99.9% uptime availability for One Click Checkout feature	High	Availability
NFR-005	Order preview popup shall load within 2 seconds on standard 4G connection	Medium	Performance
NFR-006	All customer payment data shall be encrypted using AES-256 encryption	High	Security

7. User Stories with Acceptance Criteria

7.1 One Click Checkout — Core Stories

US-001: One Click Checkout from Product Page

> *As a returning customer with saved address and payment, I want to place an order directly from the product page in one click so that I can complete my purchase quickly without going through the full checkout process.*

Acceptance Criteria:

- Given I am logged in and have a saved default address and payment method, When I view any product page, Then I shall see a One Click Checkout button below the Add to Cart button
- Given I click One Click Checkout, When the system processes my request, Then an order preview popup shall appear within 2 seconds showing product name, quantity, my default address, last 4 digits of saved card, estimated delivery, and total amount
- Given I review the popup and click Confirm Order, When payment is processed successfully, Then I shall be redirected to order confirmation page with my order ID
- Given I am not logged in, When I view a product page, Then the One Click Checkout button shall NOT be displayed
- Given I have no saved address or payment, When I view a product page, Then the One Click Checkout button shall NOT be displayed

US-002: One Click Checkout from Cart

> *As a returning customer, I want to place all items in my cart using one click so that I can purchase multiple items quickly without lengthy checkout steps.*

Acceptance Criteria:

- Given I have items in my cart and saved default address and payment, When I view my cart, Then I shall see a One Click Checkout button alongside the standard Proceed to Checkout button
- Given I click One Click Checkout from cart, When popup appears, Then it shall show all cart items with quantities, total price, default address, and payment method
- Given cart has out-of-stock items, When I click One Click Checkout, Then system shall display error: 'Some items are unavailable. Please review your cart before proceeding'
- Given cart has items with price change since last visit, When popup appears, Then updated prices shall be shown with a notice: 'Prices updated since you last visited'

US-003: Change Address in Preview Popup

> *As a returning customer, I want to change my delivery address from the order preview popup so that I can deliver to a different location without losing my one click experience.*

Acceptance Criteria:

- Given I am viewing the order preview popup, When I click Change Address, Then a dropdown shall show all my saved addresses without closing the popup
- Given I select a different saved address, When I confirm the selection, Then the popup shall update to show the newly selected address and recalculate delivery charges

- Given I want to add a new address, When I click Add New Address in the popup, Then the full checkout address form shall open allowing me to add and use a new address

US-004: Change Payment Method in Preview Popup

As a returning customer, I want to change my payment method from within the order preview popup so that I can use a different card without abandoning my order.

Acceptance Criteria:

- Given I am viewing the order preview popup, When I click Change Payment, Then all my saved payment methods shall be displayed with last 4 digits visible
- Given I select a different saved payment, When I confirm selection, Then the popup shall update to show the newly selected payment method
- Given my default payment card is expired, When the popup loads, Then system shall automatically prompt me to select a different payment method with message: 'Your default card has expired. Please select another payment method'

US-005: Quick Order Cancellation

As a customer who placed a one click order accidentally or changed their mind, I want to cancel my order within 5 minutes so that I don't have to contact customer support for a simple cancellation.

Acceptance Criteria:

- Given I have just placed a one click order, When I am on the confirmation page, Then I shall see a Cancel Order button with a 5-minute countdown timer
- Given I click Cancel Order within 5 minutes, When cancellation is confirmed, Then order shall be cancelled immediately and full refund initiated to original payment method
- Given the 5-minute window expires, When I try to cancel, Then the Cancel Order button shall disappear and I shall see a message: 'Cancellation window has closed. Please use standard return process'
- Given cancellation is successful, When system processes refund, Then I shall receive cancellation confirmation email and SMS within 5 minutes

US-006: Manage Saved Addresses

As a returning customer, I want to manage my saved delivery addresses so that I can keep my address book updated and accurate for future one click orders.

Acceptance Criteria:

- Given I go to Account Settings and click Manage Addresses, When the page loads, Then all saved addresses shall be displayed with an option to Add, Edit, Delete, or Set as Default
- Given I click Set as Default for an address, When I confirm, Then that address shall be marked as default and used for all future One Click Checkout orders
- Given I try to delete my only saved address, When I click Delete, Then system shall display warning: 'Deleting this address will disable One Click Checkout until a new address is added'
- Given I save a 6th address when 5 are already saved, When I click Save, Then system shall display: 'Maximum 5 addresses allowed. Please delete an existing address to add a new one'

US-007: Saved Payment Method Management

As a returning customer, I want to manage my saved payment methods so that I always have a valid payment option for One Click Checkout.

Acceptance Criteria:

- Given I go to Account Settings and click Manage Payments, When the page loads, Then all saved payment methods shall show card type, last 4 digits, and expiry date
- Given I click Set as Default for a payment method, When confirmed, Then that method shall be used automatically for all future One Click Checkout orders
- Given I delete my default payment method, When deletion is confirmed, Then system shall prompt me to set another saved method as default or disable One Click Checkout
- Given I save a 4th payment method when 3 are saved, When I click Save, Then system shall display: 'Maximum 3 payment methods allowed. Please delete one to add another'

US-008: Payment Failure Handling

As a customer whose one click payment fails, I want to be clearly informed and redirected so that I can complete my purchase without losing my cart.

Acceptance Criteria:

- Given I click Confirm in the one click popup and payment fails, When system detects failure, Then a clear error message shall display: 'Payment failed. Your order has not been placed'
- Given payment fails, When error is shown, Then system shall offer two options: Retry with same payment method, or Proceed with full checkout to select different payment
- Given I choose full checkout after payment failure, When redirected, Then my cart items shall be preserved and address shall be pre-filled
- Given payment fails 3 consecutive times, When third failure occurs, Then system shall lock one click checkout for 30 minutes for security and notify me via email

8. Requirement Traceability Matrix (RTM)

The following RTM maps all 21 functional and 6 non-functional requirements to their corresponding user stories, development fix IDs, and test status across SIT, UAT, and Production environments.

8.1 Core One Click Checkout RTM

Req ID	Requirement	User Story	Dev Fix ID	SIT	UAT	PROD	Remarks
OCC-001	OCC button on product page	US-001	DEV-OCC-001	**Pass**	**Pass**	**Pass**	Verified logged in only
OCC-002	OCC button on cart page	US-002	DEV-OCC-002	**Pass**	**Pass**	**Pass**	Cart page button live
OCC-003	Hidden from guests and new users	US-001	DEV-OCC-003	**Pass**	**Pass**	**Pass**	Guest check verified
OCC-004	Order preview popup contents	US-001	DEV-OCC-004	**Pass**	**Pass**	**Pass**	All fields displaying
OCC-005	Change address in popup	US-003	DEV-OCC-005	**Pass**	**Pass**	**Pass**	Dropdown working
OCC-006	Change payment in popup	US-004	DEV-OCC-006	**Pass**	**Fail**	**Pending**	UPI not loading in UAT
OCC-007	Order placed within 10 seconds	US-001	DEV-OCC-007	**Pass**	**Pass**	**Pass**	Avg 6 sec in load test
OCC-008	Order confirmation page	US-001	DEV-OCC-008	**Pass**	**Pass**	**Pass**	Order ID and tracking OK
OCC-009	Confirmation email and SMS	US-001	DEV-OCC-009	**Pass**	**Pass**	**Pass**	Email 3 min, SMS 1 min
OCC-010	5-minute cancellation window	US-005	DEV-OCC-010	**Pass**	**Pass**	**Pass**	Timer and cancel verified

8.2 Address and Payment RTM

Req ID	Requirement	User	Dev Fix	SIT	UAT	PROD	Rema

		Story	ID				rks
ADD-001	Save up to 5 addresses	US-006	DEV-ADD-001	**Pass**	**Pass**	**Pass**	Limit enforced
ADD-002	Set default address	US-006	DEV-ADD-002	**Pass**	**Pass**	**Pass**	Default used in OCC
ADD-003	Add new address with all fields	US-006	DEV-ADD-003	**Pass**	**Pass**	**Pass**	All field validations OK
ADD-004	Pincode auto-populate city/state	US-006	DEV-ADD-004	**Pass**	**Pass**	**Pass**	All pincodes working
ADD-005	Edit or delete saved address	US-006	DEV-ADD-005	**Pass**	**Pass**	**Pass**	CRUD operations verified
PAY-001	Save up to 3 payment methods	US-007	DEV-PAY-001	**Pass**	**Pass**	**Pass**	3 method limit working
PAY-002	Tokenized card storage — no raw data	US-007	DEV-PAY-002	**Pass**	**Pass**	**Pass**	PCI audit passed
PAY-003	Set default payment method	US-007	DEV-PAY-003	**Pass**	**Pass**	**Pass**	Default used in OCC
PAY-004	Show last 4 digits only in popup	US-004	DEV-PAY-004	**Pass**	**Pass**	**Pass**	Masking verified
PAY-005	Delete saved payment method	US-007	DEV-PAY-005	**Pass**	**Pass**	**Pass**	Delete and default logic OK
PAY-006	Handle payment failure gracefully	US-008	DEV-PAY-006	**Pass**	**Pass**	**Pass**	Error flow tested

8.3 Non-Functional Requirements RTM

Req ID	Requirement	Test Type	Dev Fix ID	SIT	UAT	PROD
NFR-001	Order placement within 10 seconds	Performance Test	DEV-NFR-001	**Pass**	**Pass**	**Pass**
NFR-002	PCI DSS Level 1 compliance	Security Audit	DEV-NFR-002	**Pass**	**Pass**	**Pass**

NFR-003	50,000 concurrent users supported	Load Test	DEV-NFR-003	**Pass**	**Pass**	**Pass**	
NFR-004	99.9% uptime for OCC feature	Availability Test	DEV-NFR-004	**Pass**	**Pass**	**Pass**	
NFR-005	Popup load within 2 seconds on 4G	Performance Test	DEV-NFR-005	**Pass**	**Pass**	**Pass**	
NFR-006	AES-256 encryption for payment data	Security Test	DEV-NFR-006	**Pass**	**Pass**	**Pass**	

9. RTM Summary Dashboard

Requirement Group	Total	SIT Pass	UAT Pass	UAT Fail	PROD Pass	Pending
Core OCC Requirements	10	10/10	9/10 (90%)	1	9/10 (90%)	1
Address Requirements	5	5/5 (100%)	5/5 (100%)	0	5/5 (100%)	0
Payment Requirements	6	6/6 (100%)	6/6 (100%)	0	6/6 (100%)	0
Non-Functional Requirements	6	6/6 (100%)	6/6 (100%)	0	6/6 (100%)	0
TOTAL	**27**	**27/27 (100%)**	**26/27 (96%)**	**1 open**	**26/27 (96%)**	**1**

9.1 Open Defect

Defect ID	Requirement	Description	Severity	Status
DEF-001	OCC-006	UPI payment method not appearing in change payment dropdown in order preview popup during UAT	Medium	**Fail**

10. Glossary

Term	Definition
One Click Checkout	Feature allowing returning customers to place an order with a single click using pre-saved address and payment details
Returning Customer	A registered customer who has previously placed at least one order and has saved address and payment details in their account
Order Preview Popup	A modal window displayed after clicking One Click Checkout showing order details before final confirmation to prevent accidental orders
Tokenization	Process of replacing sensitive card data with a unique token so full card details are never stored on ShopEasy servers
PCI DSS	Payment Card Industry Data Security Standard — security standard for protecting customer payment card data
Default Address	The primary delivery address set by the customer that is automatically used for One Click Checkout orders
Default Payment	The primary payment method set by the customer that is automatically used for One Click Checkout orders
Cart Abandonment	When a customer adds items to cart but leaves without completing purchase — measured as a percentage of initiated checkouts
AES-256	Advanced Encryption Standard with 256-bit key — industry standard encryption used to protect payment data at rest and in transit
BRD	Business Requirement Document — formal document capturing what the business needs the system to do from a business perspective
RTM	Requirement Traceability Matrix — document linking requirements to user stories, development fixes, and test validation
UPI	Unified Payments Interface — Indian real-time payment system allowing direct bank account payments via mobile
